

Guvview black screen issue

If everything is working with Cheese, but not with GUVview, you are using the Linux Kernel 3.16 or higher. You need to update GUVview to the latest version or it will only show a black screen.

You need to add a PPA to update to the version that works. It is version 2.0.1 and you must use the following command to add the PPA repository:

```
sudo add-apt-repository ppa:pj-assis/ppa
```

If you can't add a PPA repository because the command is not found, it means you need to install these two tools first:

```
sudo apt-get install python-software-properties software-properties-common
```
